

The Brett Method: Frequency-Based Ancient Script Decipherment

Academic Methodology and Mathematical Framework

1. CORE METHODOLOGY

The Brett Method employs harmonic frequency analysis to decode ancient scripts by mapping symbols to acoustic frequencies using the formula:

$$\text{Harmonic Mean} = n / \sum (1/f_i)$$

2. CULTURAL MODIFIERS

- Minoan ceremonial context: 1.26x modifier
- Administrative contexts: 0.8x modifier
- Religious contexts: 1.4x modifier

3. SPIRITUAL FREQUENCY LEVELS

- Low (0-300 Hz): Administrative/Mundane applications
- Medium (300-600 Hz): Ceremonial functions
- High (600+ Hz): Sacred/Divine invocations

4. VALIDATION CRITERIA

- Internal consistency: 85-92% confidence levels
- Harmonic resonance patterns
- Cultural context alignment

5. STATISTICAL FRAMEWORK

- P-value testing for significance
- Control group comparisons
- Cross-validation across scripts
